

An Overview of Hendricks County's 2013 Annual Trending

June 19, 2013

The following steps were taken to conduct the 2013 annual trending in Hendricks County:

Step 1: Re-Delineation of Neighborhoods

The vast majority of neighborhoods in Hendricks County were completely re-examined and, where necessary, re-delineated for annual trending in 2006. Additional re-delineation of some neighborhoods has occurred each year thereafter as further analysis indicated such action was appropriate.

Step 2: Calculation of New Land Values**

As required in the General Reassessment, new land values were established in July, 2011 and have been implemented since that time. No other changes have been made to the land order since that time. The new agricultural land rate has also been implemented for 2013.

Step 3: Calculation of New Residential Factors & Residential Studies**

Hendricks County implemented the new cost tables from the Department of Local Government Finance. Further, a preliminary ratio study was then conducted for improved residential properties at the township level. This study dictated which property classes required further analysis, stratification, reassessment or calculation of a new market model factor. In some instances, especially in rural areas of Hendricks County, the preliminary ratio study indicated that assessments were both accurate and uniform. In other neighborhoods, further review was required. Hendricks County trends residential values based upon the market area delineation rather than the neighborhood code delineation.

Step 4: Updated Commercial & Industrial Improvement Values**

Hendricks County implemented the new cost tables from the Department of Local Government Finance.

****Please note that the period of time from which sales were used for this ratio study was from 1/1/2012 to 2/28/2013. Every attempt was made to ensure a representative sample for each property class. However, given the very low sales activity for vacant commercial and industrial property in Hendricks County, no additional usable sales data was yielded even when attempting to expand the sales window back to 2008.**
